网络交互接口设计

1. 系统管理接口

1.1 用户认证与权限管理接口(/api/auth)

1.1.1 用户注册

• **URL**: /api/auth/demo/register

• 方法: POST

• 请求体:

```
"username": "string",
  "email": "string",
  "password": "string"
}
```

• 响应:

```
{
    "code": 200,
    "message": "注册成功",
    "data": "注册成功"
}
```

1.1.2 用户登录

• URL: /api/auth/demo/login

• 方法: POST

• 请求体:

```
{
  "email": "string",
  "password": "string"
}
```

```
{
  "code": 200,
  "message": "success",
  "data": {
     "token": "string",
     "expiration": "long"
}
```

1.1.3 获取路由信息

• **URL**: /api/auth/demo/getRouters

• 方法: GET

• 响应:

1.1.4 获取用户权限信息

• **URL**: /api/auth/demo/getUserPrivateInformation

• 方法: GET

```
{
   "code": 200,
   "message": "success",
   "data": ["string", "string"]
}
```

1.1.5 获取用户角色信息

• **URL**: /api/auth/demo/getUserRole

• 方法: GET

• 响应:

```
{
   "code": 200,
   "message": "success",
   "data": {
      "id": "long",
      "roleName": "string",
      "rolePermissions": ["string"]
}
```

1.1.6 获取用户基本信息

• **URL**: /api/auth/demo/getUserBaseInfo

• 方法: GET

• 响应:

```
"code": 200,
   "message": "success",
   "data": {
      "id": "long",
      "username": "string",
      "email": "string",
      "roleId": "long"
}
```

1.1.7 编辑路由

- **URL**: /api/auth/demo/editRouter
- 方法: POST
- 请求体:

```
"id": "long",
   "path": "string",
   "name": "string",
   "component": "string",
   "redirect": "string",
   "meta": {
     "title": "string",
     "icon": "string",
     "hidden": "boolean"
}
```

```
{
    "code": 200,
    "message": "编辑成功",
    "data": null
}
```

1.1.8 添加路由

- **URL**: /api/auth/demo/addRouter
- 方法: POST
- 请求体:

```
"path": "string",
  "name": "string",
  "component": "string",
  "redirect": "string",
  "meta": {
    "title": "string",
    "icon": "string",
    "hidden": "boolean"
}
```

```
{
    "code": 200,
    "message": "添加成功",
    "data": null
}
```

1.1.9 删除路由

- **URL**: /api/auth/demo/deleteRouter
- 方法: POST
- 请求体:

```
{
    "id": "long"
}
```

• 响应:

```
{
    "code": 200,
    "message": "删除成功",
    "data": null
}
```

1.1.10 获取角色列表

• **URL**: /api/auth/demo/getRoleList

- 方法: GET
- 响应:

1.1.11 添加角色

• **URL**: /api/auth/demo/addRole

• 方法: POST

• 请求体:

```
{
   "roleName": "string",
   "rolePermissions": ["string"]
}
```

• 响应:

```
{
    "code": 200,
    "message": "添加成功",
    "data": null
}
```

1.1.12 编辑角色

- **URL**: /api/auth/demo/editRole
- 方法: POST
- 请求体:

```
"id": "long",
  "roleName": "string",
  "rolePermissions": ["string"]
}
```

```
{
    "code": 200,
    "message": "编辑成功",
    "data": null
}
```

1.1.13 更新角色权限

- **URL**: /api/auth/demo/updateRoleRouters
- 方法: POST
- 请求体:

```
{
   "roleId": "long",
   "permissions": ["string"]
}
```

• 响应:

```
{
    "code": 200,
    "message": "更新成功",
    "data": null
}
```

1.1.14 删除角色

- URL: /api/auth/demo/deleteRole
- 方法: POST
- 请求体:

```
{
    "id": "long"
}
```

```
{
    "code": 200,
    "message": "删除成功",
    "data": null
}
```

1.2 角色管理接口 (/api/role)

1.2.1 获取角色列表

• **URL**: /api/role/getRoleList

• 方法: GET

参数:

o roleName (可选): 角色名称

• 响应:

1.3 用户管理接口 (/api/user)

1.3.1 获取用户管理信息

• **URL**: /api/user/getUserManageInfo

- 方法: POST
- 请求体:

```
{
   "pageNum": "int",
   "pageSize": "int",
   "query": {
       "username": "string",
       "email": "string"
}
```

```
"code": 200,
"message": "success",
"data": {
    "total": "long",
    "id": "long",
    "username": "string",
    "email": "string",
    "roleId": "long"
    }
],
    "pageNum": "int",
    "pageSize": "int"
}
```

1.3.2 删除用户

- **URL**: /api/user/deleteUser
- 方法: POST
- 请求体:

```
{
  "id": "long",
  "password": "string"
}
```

```
{
    "code": 200,
    "message": "删除成功",
    "data": null
}
```

1.3.3 更新用户信息

• **URL**: /api/user/updateUser

• 方法: POST

• 请求体:

```
"id": "long",
  "username": "string",
  "email": "string",
  "roleId": "long"
}
```

• 响应:

```
{
    "code": 200,
    "message": "更新成功",
    "data": null
}
```

2. Boss招聘数据接口

2.1 基础数据接口 (/api/boss/basic)

2.1.1 获取城市名称列表

• **URL**: /api/boss/basic/city-name-list

• 方法: GET

```
["北京","上海","广州","深圳"]
```

2.1.2 获取职位名称列表

- URL: /api/boss/basic/position-name-list
- 方法: GET
- 参数:
 - cityName (可选, 默认值: "all"): 城市名称
- 响应:

```
["Java开发","前端开发","算法工程师","数据分析师"]
```

2.2 用户分析接口 (/api/boss/user)

2.2.1 获取薪资热门职位分析

- **URL**: /api/boss/user/salary-hot-job
- 方法: GET
- 参数:
 - 。 limit (可选, 默认值: 20): 限制返回数量
- 响应:

2.2.2 获取二维分析图表数据

- **URL**: /api/boss/user/two-dimensional-analysis-chart
- 方法: GET
- 参数:
 - cityName (可选, 默认值: "all"): 城市名称
 - o positionName (可选, 默认值: "all"): 职位名称
 - xAxis (可选, 默认值: "salary_value"): X轴数据
 - 。 yAxis (可选, 默认值: "degree_value"): Y轴数据
- 响应:

2.3 数据可视化接口 (/api/boss)

2.3.1 获取所有职位数据

• **URL**: /api/boss/jobs

• 方法: GET

```
[
    "id": "string",
    "position": "string",
    "company": "string",
    "salary": "string",
    "city": "string",
    "experience": "string",
    "education": "string",
    "timeStamp": "string"
}
```

2.3.2 按职位获取数据

• **URL**: /api/boss/jobs/position/{position}

• 方法: GET

• 路径参数:

o position: 职位名称

• 响应:

```
[
    "id": "string",
    "position": "string",
    "company": "string",
    "salary": "string",
    "city": "string",
    "experience": "string",
    "education": "string",
    "timeStamp": "string"
}
```

2.3.3 按职位获取数据(请求参数)

• **URL**: /api/boss/jobs/position

• 方法: GET

参数:

o position: 职位名称

• 响应:

```
"id": "string",
   "position": "string",
   "company": "string",
   "salary": "string",
   "city": "string",
   "experience": "string",
   "education": "string",
   "timeStamp": "string"
}
```

2.3.4 按职位和时间段获取数据

• **URL**: /api/boss/jobs/position/{position}/time/{timePeriod}

• 方法: GET

• 路径参数:

position: 职位名称timePeriod: 时间段

• 响应:

```
[
    "id": "string",
    "position": "string",
    "company": "string",
    "salary": "string",
    "city": "string",
    "experience": "string",
    "education": "string",
    "timeStamp": "string"
}
```

2.3.5 按职位和时间段获取数据(请求参数)

• **URL**: /api/boss/jobs/position/time

• 方法: GET

参数:

○ position: 职位名称

○ timePeriod:时间段

• 响应:

```
[
    "id": "string",
    "position": "string",
    "company": "string",
    "salary": "string",
    "city": "string",
    "experience": "string",
    "education": "string",
    "timeStamp": "string"
}
```

2.3.6 获取所有职位列表

• **URL**: /api/boss/positions

• 方法: GET

• 响应:

```
["Java开发","前端开发","算法工程师","数据分析师"]
```

2.3.7 获取所有时间段列表

• URL: /api/boss/timePeriods

• 方法: GET

```
["2023-01", "2023-02", "2023-03"]
```

2.3.8 获取所有城市列表

• URL: /api/boss/cities

• 方法: GET

• 响应:

["北京","上海","广州","深圳"]
